SMART INVENTORY

SMART Inventory

SMART Inventory is a system that provides full management of distributed stores and warehouses. It gives you full control over the whole procurement cycle, starting with the Purchase Request, PO issuance, receiving tenders, items receiving and inspection, and finally adding items to stock. With SMART Inventory, you will be able to fully monitor the stores IN/OUT transactions, stock levels, ordering levels, and generate stock value reports.

SMART Inventory offers you :

- * Fully Customized Notifications.
- * Full synchronization between distributed databases.
- * Item control through Serial Number and/or Part Number in addition to item coding.
- * Full Compatibility with Microsoft Office.
- * Customized reports.
- * Full control of user access and privileges.

On-site or Online ?!

ITQAN helps you deploy the Smart Solution on-site on your servers, or host it online on ITQAN's cloud to get the benefits of your solution with reduced initial investment.

Move Smartly to the future
